

Mammalia-Macaque-Dominance Network

Laura Silvana Alvarez Luque - Daniel Losada Molina

The dominance relations between *Macaca fuscata* females were determined based on approach-retreat episodes around the food. The dominance range order was arranged based on these dyadic relations. Dominance is defined as "Physical contact unique to aggressive dominance interactions such as biting, head butting, fighting"

- **Vertices:** 62 Macaques.
- **Edges:** 1.167 edges representing the pairwise dominance between macaques.
- **Weights:** Frequency of the dominance.
- **Notes:** This is a animal interation network, undirected and weighted.

Dominance Network of Macaques
